

Extended length OSB panels engineered specifically for wall applications and designed for vertical installation.

- Lowers building costs
- Increases wall strength
- Helps meet code in wind and seismic zones
- 20 Year Transferrable Limited Warranty

CONSTRUCTING TALLER CEILINGS

Nearly half of today's homes have ceilings taller than 8'. LP LongLength panels are ideal for these applications, providing the ability to more easily construct taller ceilings while reducing waste and labor time.

LOWER BUILDING COSTS

Because of optimized vertical installation, you need fewer total panels to build the same house. And you don't have to cut and install fillers or blocking material. All this adds up to reduced labor costs and less waste on the job site.

BUILD WITH BETTER ENGINEERING

LP LongLength panels installed vertically allow you to reduce the number of seams. This will create a tighter building envelope, promoting lower energy costs. And this means a better home.

MEETING HIGH-WIND ZONE CODES

In wind and seismic areas, special building requirements add time and cost to your construction process. LP LongLength panels can help you build stronger walls and meet code more efficiently in these areas.

INCREASES WALL STRENGTH

LP LongLength panels provide a stronger frame for the house as you build in single and multi-story applications. Using only one panel to connect the top plate with the floor joists or the upper top plate with the rim board provides a continuous load path to the foundation. So, your walls are stronger.

MORE EASILY MEET CODES WITH LESS HARDWARE

Most high-wind building codes require special strapping, blocking and fasteners, which make the home stronger but add time and hassle. When properly installed, the vertical length of LP LongLength panels reduces the need for this additional hardware, so your home is strong and your job is easier.

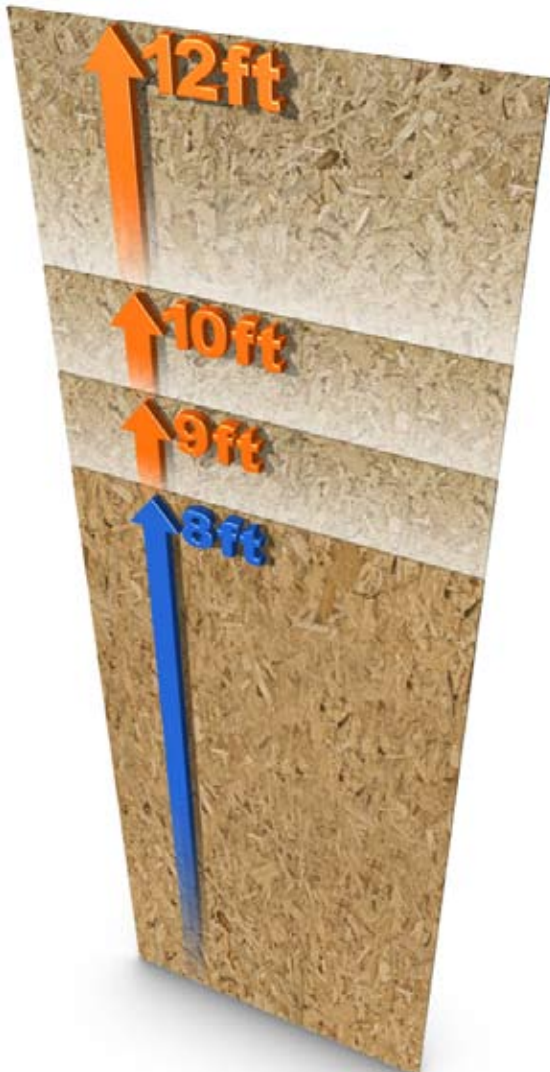

When you are building tall ceilings or trying to meet code in high wind zones, horizontal installation of standard sized 4'x8' panels is no longer the most efficient or strongest way to build.

LP LongLength requires fewer panels to build the same house. It installs vertically instead of horizontally, yielding stronger walls, fewer seams, greater energy efficiency, reduced waste on the jobsite, and lower labor costs.

SPECIFICATIONS

LP LongLength panels are available in a variety of lengths and thicknesses. Please contact your LP Sales Representative for more information.

LP OSB SHEATHING
20 YEAR
 TRANSFERABLE
 LIMITED WARRANTY

20-YEAR LIMITED WARRANTY

You'll have peace of mind knowing that its covered by a 20-Year Limited Warranty and manufactured by the world's leading OSB manufacturer. See warranty details at lpcorp.com

ENVIRONMENTALLY FRIENDLY

LP OSB products are the right choices for low environmental impact and are a renewable resource. Our panels are made from rapidly regenerating trees, and we use safe resins as a binder. The efficient use of raw materials makes LP OSB an environmentally-friendly choice.
