

LP SuperStruct Furniture Panels are engineered specifically for use in upholstered furniture frames. Strong, consistent, flat, and free of defects, LP SuperStruct Furniture Panels can help reduce raw materials costs and increase productivity without sacrificing quality.

- More cost efficient than plywood
- Helps improve yield and reduce waste
- Made by the world's largest producer of strand based products

LP SUPERSTRUCT®

BUILDING PRODUCTS FURNITURE PANELS

A HISTORY OF INNOVATION

An industry leader in strand technology for more than 35 years, LP manufactures high-performance, cost-efficient engineered wood materials that are designed to outperform traditional wood. With a focus on consistent quality and product innovation, all of LP's products are developed with the customer's end-use application in mind. Working closely with furniture industry specialists, LP developed LP SuperStruct Furniture Panels to meet the specialized needs of upholstered furniture manufacturers.

ENGINEERED STRAND TECHNOLOGY

LP utilizes innovative strand technology to create furniture panels with exceptional strength across both the horizontal and vertical axes. These dense, consistent, flat, smooth panels are an ideal replacement for plywood frame components. All LP SuperStruct Panels are APA-Rated.

DESIGNED FOR MAXIMUM PRODUCTIVITY AND SAVINGS

Because LP SuperStruct Furniture Panels are engineered, they have no core voids, knotholes, or defects. And they are consistently flat – so you don't have to worry about warping, buckling, splitting, and delamination. The entire panel is uniform and usable, helping increase productivity and yield while reducing waste.

EASY TO WORK WITH

LP SuperStruct Furniture Panels can be cut just like plywood. They require no special tools or fasteners and are designed to provide optimum fastener retention. And they are easy to work with, which helps you maximize productivity while assembling high-quality frames.

ENVIRONMENTALLY RESPONSIBLE

LP SuperStruct products are made of wood, a renewable resource. Our raw material procurement targets small, fast-growing trees, which results in efficient use of raw materials and a low environmental impact. In addition, only low-emitting safe resins are used as a binder.

UNINTERRUPTED SUPPLY

LP has manufacturing facilities throughout the U.S., Canada, and South America. Our extensive geographical reach allows you to buy from freight logical mills and helps ensure that you get the product you need when you need it.

APPLICATION-DRIVEN SOLUTIONS

No two furniture designs, components, or assembly processes are exactly the same. That's why LP works with you one-on-one to help determine your particular requirements and provide the LP SuperStruct Furniture Panel solution that's best for your application.
